DETAILED ACTION

Drawings

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing.

The specification refers to drawings, however, no drawing have yet been submitted to accompany the instant U.S. specification.

Claim Objections

Claims 3-6 and 10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim can refer to other claims in the alternative only (in the case of instant claim 3) and cannot depend from any other multiple dependent claim (in the case of claims 4-6 and 10). See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claims 1, 8 and 9 are objected to because of the following informalities: The above claims contain terms lacking proper antecedent basis as follows:

1. “the outlet pipe” (claim 1 line 5)
2. “the cover” (claim 1 line 5)
3. “the discharge neck” (claim 8 line 1 and claim 9 line 2)

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese 2002 144013 (JP'013). In the English language abstract supplied by the applicant for example, JP'013 teaches a molten metal supply device for supplying molten metal to a casting installation including a crucible (40) with a cover (41) with a dosing and discharge pump structure including an outlet pipe as part of a crucible insert extending into the molten metal and through the cover, which is pivotable, where the pipe includes a discharge neck, thereby showing all aspects of the above claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Each of Mancusi, teaching a further prior art pumping device and Rapp, the publication of the instant specification are also cited.
